MASKS

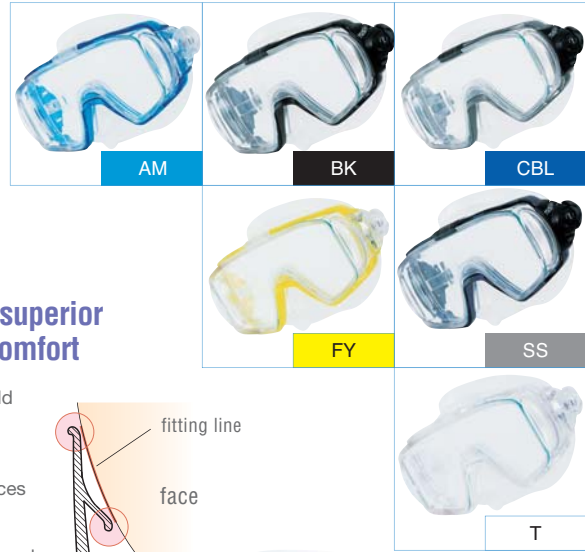

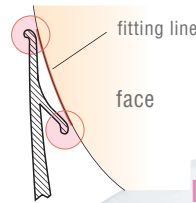

Blind spots reduced to a minimum

Conventional three-lens masks have blind spots, but we have reduced the size of these blind spots through the use of domed side windows, creating a wide-angle panoramic view.

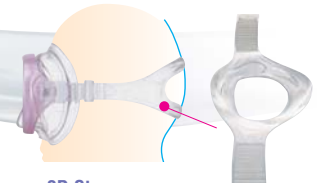

Round edge skirt for superior seal and increased comfort

The M-3I features a round mold (patent pending), special cross-sectionally shaped skirt fitting. The resulting soft fit suppresses pressure and reduces creasing left on the face. This "planar fit, instead of linear fit" silicone skirt maintains a great seal and unprecedented comfort.

Three-dimensional strap

The M-3I employs a newly developed 3D strap (patent pending) that snugly fits against the head's curvature for superior comfort and unprecedented fit.

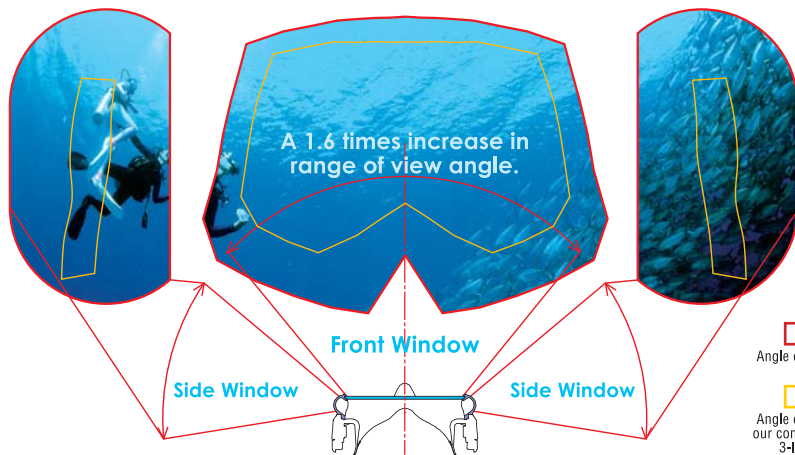

3D Strap for superior comfort

An ultra-wide panoramic-view Three-lens mask designed to increase the field of view and improve safety by ensuring you don't lose sight of your diving buddy

1.6x Viewing Angle

The front and side windows realize an ultra wide viewing angle of 168° (Our conventional 3-lens mask provides 107°). This three-lens mask was specially designed to help you keep sight of your diving buddy, and ensure that you don't miss that special moment.

Five angle strap adjustor

This design features a black silicone skirt and strap.
